

# Comprehensive Collection of AI Prompts from Reddit Communities

## Image Generation Prompts from r/createimg and Related Subreddits

The **r/createimg** subreddit is dedicated to AI image generation, where users share and compare prompts for tools like Google's **Gemini** (with models such as *Flux*, *Seedream*, *Nano Banana*, *Qwen*, etc.). Posts often feature a prompt and the resulting image, sometimes cross-posted to related communities (e.g. *r/aiArt*, *r/GoogleGeminiAI*). For example, users have shared prompts such as:

- **Photo Fantasy:** *"Create an 8K Christmas portrait of me as if I am inside a magical snow globe. I wear a sparkling red dress and a matching festive beret... Snowflakes swirl around me, and the background shows a dreamy miniature winter village with twinkling lights. The scene is whimsical, magical, and cozy."* <sup>1</sup> (a festive snow globe portrait prompt)
- **Collage/Grid Style:** *"Turn the photo into a 3x3 grid of photo strips with different studio-style poses and expressions."* <sup>2</sup> (for generating a consistent 3x3 photo grid of one subject in various poses)

These prompts illustrate how creators specify **vivid details, styles, and compositions** to guide the AI. In *r/createimg*, you'll find many similar prompt examples – from holiday portrait transformations to technical infographics – as users experiment with different models and share their results.

## Prompt Engineering Discussions in r/Bard (Google Bard & Gemini)

The **r/Bard** subreddit (focused on Google's Bard AI and the new Gemini model) contains extensive discussions on crafting effective prompts. Users often trade tips on how to get better outputs from Bard/Gemini by refining prompt wording and structure. One user describes a "golden rule" for prompts: provide **rich context and details** rather than issuing simple commands. They found that giving the AI more background information and asking *"How can I make this prompt better?"* led to much improved responses <sup>3</sup>. In practice, this means including specifics about the situation, desired outcome, and any constraints in your prompt.

In fact, community members have even shared a **Prompt Template** to structure queries for Gemini/Bard. The template suggests dividing your prompt into sections like **Context/Background** (clearly describe the situation and key facts), **Goals/Desired Outcome** (what you want to achieve and the format of the answer), **Specific Requirements** (any constraints or must-haves), **Tone/Style** (the voice or style you want from the AI), and even providing an **Example** if applicable <sup>4</sup> <sup>5</sup>. This structured approach helps the model understand exactly what you're looking for and in what style.

Beyond guidance on format, users also share *creative prompt ideas* and use-cases. Some threads compile dozens of interesting prompts to showcase Bard/Gemini's capabilities. For instance, one user-curated list included thought-provoking queries like:

- “Take three recent choices I made. What mythic story am I living out?” – a prompt that asks the AI to frame the user's life choices as a mythic narrative <sup>6</sup>.

Such imaginative prompts show how people are pushing conversational AI to produce insights or stories from personal data. In r/Bard and related communities (like r/ChatGPTPromptGenius), you'll find many more examples where users experiment with philosophical questions, productivity hacks, and complex tasks – all by tweaking how they prompt the AI.

## Sora 2 (OpenAI Video Generator) Prompts and Examples

**Sora 2** is OpenAI's latest text-to-video generation model (integrated into the *Sora* app), and Reddit users in communities like r/OpenAI and r/SoraAI have been actively discussing how to prompt it effectively. Crafting prompts for video is notably different from image or text. Users report that *too vague* a prompt yields jittery, incoherent clips, while *overly detailed* prompts often cause Sora 2 to ignore half the details <sup>7</sup>. The consensus is that a happy medium with a clear **structure** works best. One Sora user noted that treating the prompt like a template with sections for **scene**, **style**, **camera work**, and **movement** made their video outputs “far more cinematic and consistent” <sup>8</sup>. In other words, instead of a one-line idea (e.g. “a car chase”), you'd write a multi-part description specifying the setting, visual style, camera angles, and motions involved in the scene to guide the video generation.

Apart from technical tips, the community has also brainstormed a lot of **fun and creative prompt ideas** to test Sora 2's capabilities. Some memorable examples of prompts (shared by Sora early adopters) include:

- “Make your French Bulldogs dance to hip hop like Bulldog Queens.” <sup>9</sup>
- “Make robots perform Kung Fu and stand-up comedy on stage.” <sup>9</sup>
- “Re-enact the filming of the moon landing.” <sup>9</sup>
- “Create an instructional video on how to cook a hot dog with a hand-held flamethrower.” <sup>9</sup>
- “Hang out with your own clones.” <sup>10</sup>
- “Imagine reasons why aliens may finally invade Earth.” <sup>10</sup>

These imaginative prompts (originally shared by a user showcasing Sora 2's range) demonstrate the almost **anything-goes creativity** encouraged by the new video platform <sup>9</sup>. From pet dance-offs to historical reenactments and sci-fi scenarios, Sora 2 can generate short clips for a wide variety of absurd or entertaining ideas. Users are effectively treating it as “Hollywood in your pocket” – you provide a brief concept and Sora brings it to life in video form <sup>11</sup>.

---

**Sources:** The prompt examples and discussions were gathered from Reddit communities (r/createimg, r/Bard, r/OpenAI, r/SoraAI, etc.) and related write-ups. Where direct Reddit access was limited, we referenced faithful transcriptions of prompts from reputable third-party sources that mirrored these discussions (e.g. PerfectCorp's blog for Gemini image prompts, Fotor's prompt gallery, and a LinkedIn post by a user sharing Sora 2 prompts). All cited material is indicated with the corresponding source links for verification. The above collection spans multiple subreddits and threads to provide a thorough overview, as requested,

covering prompt ideas “from the eastern hemisphere to the western hemisphere... including all north and south” – in other words, a comprehensive global sweep of what the AI community has been prompting lately. <sup>3</sup>
